Preface iii

List of companies ix

List of participants xi

Problems xv

1 Danfoss: Scroll Optimization xv

2 DANISCO: Temperature and Moisture Gradients in Sugar Silos . xvi

3 Danish Maritime Institute: Dynamic Positioning System. xix

4 Grundfos: Mixing of Clorine in Swimmingpools. xix

5 LEGO: How to Build with LEGO. xix

6 SCANtechnology: Feature Recognition in 3D-Scanning. xxi

Work Group Reports 1

Danfoss: Scroll Optimization 3

1 Introduction 3

2 The Geometry of Plane Curves 4

3 Scroll Geometry 6

3.1 Using the natural equation 7

3.2 The natural equation for a closed plane curve 8

3.3 The volume of the compression chambers 9

3.4 Circular orbit 10

3.5 The other side of the wall 11

3.6 Examples 14

4 Leakage Between the Compression Chambers 16

4.1 Governing equations and boundary conditions 18

4.2 Nondimensionalisation and leading-order equations 19

4.3 Solution in the quasi-steady limit 21

5 Conservation Equations for the Chambers 22
6 The Coupled Problem 24
6.1 The small coupling limit 25
7 Numerical Results 26
8 Conclusions 32

DANISCO: Temperature and Moisture Gradients in Sugar Silos 37
1 Introduction 37
2 Sorption Isotherms 38
3 The Heat Equation 39
4 Moisture Migration 40
5 Scaling 43
6 Concluding Remarks 46

Danish Maritime Institute: Dynamic Positioning System 49
1 Introduction 49
2 Solving the Problem as a Discretized Optimization Problem . . . 49
2.1 The proposed solution to the problem 50
2.2 Limitations and enhancements 51
3 A Lagrangian Formulation 52
3.1 Mathematical formulation 52
3.2 Local extrema 54
3.3 Summary of method 57
4 A Maple® Program 58
4.1 Statement of the first problem 58
4.2 Solution to the first problem 58
4.3 Numerical experiment 60
4.4 Output of the MAPLE program 64
4.5 Maximum capability 65
4.6 The case with two motors on maximum capability 67
5 Conclusions 69

Grundfos: Chlorination of Swimming Pools 71
1 Introduction 71

2 An ODE Model 72
2.1 Chlorine sources and sinks 72
2.2 Source and loss terms for p 73
2.3 Source and loss terms for b 74
3 The ODE 75
4 Discussion 78
5 Summary 79

LEGO: Automated Model Construction **81**
1 The Problem Description 81
2 The Simplified Approach 82
3 Formulation as a Combinatorial Optimisation Problem 83
4 The Penalty Function 84
5 Using the Penalty Function — Implementation Strategies 90
6 Conclusions 93

SCANtechnology: Feature Recognition **95**
1 Introduction 95
2 Maximal Principal Curvatures 96
3 Calculation of Maximal Principal Curvature on Sculptures 101
4 Finding Center Lines 102
5 An Approximate Method for Finding Center Lines 103
5.1 A step by step algorithm 103
5.2 Implementation 105
6 Drilling Strategy 107
7 Conclusion 107
